

Sarah Hasan

Junior Software Engineer

Bahraini | +973 3727 7366 | sa.homaidan@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Software engineering graduate from the University of Bahrain who learns quickly and delivers end to end, from requirements to tested, deployed features. Hands-on with Flutter, React and Next.js, and trained in NLP through six courses completed in 2026. Currently focused on AI agents and LLM-powered applications. Works effectively independently or within a team in fast-paced environments, with attention to clean code and clear documentation. Seeking a junior software engineering role or internship to contribute, gain experience and grow.

HIGHLIGHTED SKILLS

- **Programming Languages:** Java, Python, TypeScript, JavaScript, Dart, PHP, HTML/CSS
- **Frameworks and Databases:** Flutter, React, Next.js, CSS, MySQL, Firebase
- **AI and NLP:** TensorFlow, BERT, NLTK, Gemini API, Prompt Engineering
- **AI Tools:** Claude, ChatGPT, Gemini, Manus
- **Development Tools:** Git, GitHub, Docker, Linux, PowerShell, VS Code, Visual Studio, IntelliJ
- **Business and Productivity:** Power BI, Microsoft Project, Microsoft Word, Microsoft PowerPoint
- **Design Tools:** Figma

RELEVANT EXPERIENCE

- **Industrial Trainee – Almoayyed Computers Middle East (ACME)** **Jul 2026 – Aug 2026**
Completed a software engineering internship, contributing to three real-world software projects and collaborating within a professional software development environment.
 - Pet Adoption Management System (Aamal Almoayyed Sanctuary): Designed and built the prototype independently. A web application that facilitates pet adoption by managing animal profiles, adoption requests, visit booking and administrative processes (aamal-ebon.vercel.app).
 - Internship Management System: Contributed to the development of a web-based system for managing internship processes by implementing new features, improving workflows, and enhancing system functionality, using Next.js, TypeScript and Prisma.
 - Down Syndrome Foundation Management System: Participated in developing an internal management system used by employees to manage beneficiaries, streamline daily operations, and improve organizational workflows.
 - Applied the complete Software Development Life Cycle (SDLC) by analyzing business requirements, designing solutions, implementing features, performing software testing, supporting deployment activities, and continuously improving system quality.
 - Leveraged AI-powered development tools to accelerate development, improve code quality, assist with debugging, and enhance problem-solving efficiency.
 - Performed debugging, root cause analysis, and troubleshooting to identify and resolve software defects while maintaining software reliability and performance.
 - Applied software engineering principles, object-oriented programming (OOP) concepts, and collaborative development practices in a real-world industry environment, strengthening both technical and analytical skills.

PROJECTS

- **Graduation Project – Irshad** **2025 – 2026**
Bilingual (Arabic/English) mobile app supporting people with disabilities, built with Flutter and Firebase. Features a Gemini-powered AI assistant, an accessibility map, an Ask a Doctor service and an admin dashboard.
Achieved grade: A

- **Piscine Go – Reboot01 Coding Institute** 2023
Core programming and computer science concepts like conditions, loops, and sorting algorithms.

EDUCATION

- **B.Sc. in Software Engineering** 2021 – 2026
University of Bahrain
- **High School Diploma** 2018 – 2021
Science Track (Mathematics), Sitra Secondary School, 95.9%

CERTIFICATION

- **NLP: Twitter Sentiment Analysis – Coursera** 2026
Performed sentiment analysis on Twitter data using NLP techniques. Analyzed and classified textual data to identify customer opinions and trends.
- **Sentiment Analysis with Deep Learning using BERT – Coursera** 2026
Applied BERT-based deep learning models for sentiment classification. Worked with NLP pipelines and transformer models for text analysis.
- **Fine Tune BERT for Text Classification with TensorFlow – Coursera** 2026
Fine-tuned pre-trained BERT models for text classification tasks using TensorFlow. Applied transfer learning techniques to optimize model performance on custom datasets.
- **Create Chatbots & NLP Apps – Coursera** 2026
Built conversational chatbots and NLP-powered applications. Designed and deployed end-to-end NLP pipelines for real-world use cases.
- **Natural Language Processing Essentials – Edureka / Coursera** 2026
Gained foundational and applied knowledge in core NLP concepts and techniques. Implemented text preprocessing, feature extraction, and language modeling methods.
- **Python NLTK for Beginners: Customer Satisfaction Analysis – Coursera** 2026
Performed text analysis using NLTK for customer feedback and sentiment insights. Applied natural language processing techniques to analyze customer satisfaction data.
- **Python 101: Develop Your First Python Program – Coursera** 2026
Developed basic Python programming skills including variables, loops, and functions.
- **Microsoft Power BI Data Analyst (PL-300) – Microsoft** 2024
Data visualization, dashboards, and business intelligence reporting.
- **INJAZ Company Program – Product Development Manager** 2021
Awarded "Best Social Impact" for leading the creation of an impactful solution.

VOLUNTEERING

- **Volunteer – Al Eker Charitable Society** Since 2024
Participating in community support and charitable activities.

LANGUAGES

- Arabic (Native)
- English (Fluent)
